

The seat drop value described in the compatibility table is primarily a value relative to the original-equipment seat.

It is measured by mounting a Recaro Reclining seat.

— **explanatory note** — Differences may arise due to the position of the thickness and shape of the bottom of the seat, and seat settling due to aging of the original-equipment seat.

Note: If the original-equipment seat incorporates a height adjustment function, this value is relative to the lowest position.

Note: As a general rule, driver's seat data (passenger seats have different values depending on the presence or absence of height adjustment function)
